Poland, Opole

SKILLS

JavaScript, TypeScript

Nodejs, Express, RESTful API

Postgres, Firebase

Reactjs, Vite, Gatsby

RTK (Redux Toolkit), React Router

CSS, SCSS, styled-components, Tailwind

C#

ASP.NET Core, .NET Framework (WPF)

Entity Framework, LINQ

EDUCATION

Computer engineer

University of Opole

2021-2025

LANGUAGES

Polish Native

English B2+

PROFILE

Experienced Frontend Developer with a strong background in JavaScript, TypeScript, React, React Native, Redux Toolkit, and working with APIs on the frontend side.

Proficient in creating RESTful APIs using Backend technologies such as Node.js, Express, ASP.NET Core. I have also developed applications in .NET Framework WPF and .NET MAUI.

WORK EXPERIENCE

React Mobile Developer

MyTable

Aug 2022 - Feb 2023

Skills: TypeScript, React Native, Redux Toolkit, Navigation, Firebase and Figma.

I developed and maintained web and mobile applications using Reactjs, React Native, TypeScript, and Redux in an Agile environment. My key responsibilities included designing and maintaining components integrated with Firebase APIs, and applying my knowledge of component lifecycle, state management, and navigation for enhanced user experiences. The result of our efforts was "mytable", an application that consolidates local events, offers, and media into one platform, delivering them to users based on their location.

Intern .NET Developer

CODEFUSION

Jul 2022

Skills: C#, .NET MAUI, LINQ, MVVM and XAML.

I contributed to the creation of an Android mobile app using .NET MAUI. I focused on utilizing the MVVM design pattern, and was involved in the development of the backend, UI, and push notifications. JSON was employed for data storage to ensure efficient data handling. A key goal throughout was to ensure a user-friendly, accessible experience for all users.

PROJECT

Dev Docket

Live: dev-docket.vercel.app

Skills: TypeScript, Express, Vite (React), Postgres, RTK, Swagger, UML

I created an application (and continue to develop it) for managing tasks within a team. The application has a feature for creating projects and tasks within the project. Tasks have implemented Markdown support in the task description. Currently, a Kanban board has been implemented to display tasks in three status columns for the task.

The backend of the application (RESTful API) was created in Express using the MVC pattern. The frontend was created in Vite (React) and communicates with the API using the Axios library. Everything was done in TypeScript

> The rest of the projects are in my portfolio and on my github: petitoff.vercel.app
